IGOR MATVIICHUK

JAVA BACKEND DEVELOPER

Malta | igor.matveychuk@gmail.com | linkedin.com/in/igor-matviichuk-java | github.com/IgorMatv
Malta residence permit • Eligible for Jobsplus employment licence upon employer application

PROFILE

Java Backend Developer working with Java since 2007, experienced in building data-processing, workflow and real-time applications with Java and Spring Boot. Strong hands-on background in PostgreSQL, REST APIs, batch processing, Camunda, Kafka and production-oriented testing. Focused on implementation, debugging and delivering reliable backend services.

CORE SKILLS

Java 21 • Spring Boot • REST APIs • Spring Batch • Camunda 7 • Kafka • WebSocket/STOMP
PostgreSQL • Redis • MyBatis • Spring Data JPA • Liquibase/Flyway • Apache NiFi
JUnit • Mockito • Testcontainers • Docker Compose • Kubernetes • Jenkins • Prometheus • Grafana • Splunk

INDEPENDENT PROJECTS & PROFESSIONAL DEVELOPMENT | 2026–Present

- Designing and developing independent backend applications with Java, Spring Boot, PostgreSQL and Redis, focusing on real-time communication, data processing and containerised deployment.
- Completed the DeepLearning.AI Data Engineering Professional Certificate; continuing hands-on practice in data engineering, system design and cloud architecture.

BeatGame — Real-Time Multiplayer Music Game | 2026
Public repository: github.com/IgorMatv/beat-game-public

- Designed and built a multiplayer game using Java 21, Spring Boot 3.2, React/TypeScript and STOMP/SockJS WebSockets.
- Implemented room lifecycle, rounds, scoring and reconnect handling, using PostgreSQL for durable entities and Redis for active game state.
- Containerised the six-service stack with Docker Compose, Nginx, PostgreSQL, Redis, Prometheus and Grafana; added JUnit and Testcontainers integration tests.

PROFESSIONAL EXPERIENCE

Luxoft / DXC Technology — Java Backend Developer — 2019–2025

Contract engagement • Selected projects

Internal CxO Investment Analytics & Staffing PoCs | 2024

- Designed and implemented a CxO analytics backend with fact/dimension models, data marts and realised, unrealised and cancelled investment calculations.
- Built drill-down REST APIs and a Spring Cloud Data Flow prototype for orchestrating independent Spring Batch calculation tasks.
- Created a separate staffing PoC with APIs for projects, SOWs, employee profiles, skills, bench availability, assignments and candidate filtering.
- Wrote Kubernetes YAML manifests for deploying the PoC services to the corporate environment.

Tesco — Gender Pay Gap Reporting & Performance Management | 2021–2024

- Developed a Spring Batch pipeline processing Excel datasets for approximately 250,000 employees for annual Gender Pay Gap reporting.
- Implemented metadata-driven Apache POI parsing, validation, persistence, calculations and detailed Excel report generation using PostgreSQL and MyBatis.
- Designed Camunda 7 BPMN workflows and reusable process templates for enterprise performance-review processes.
- Built a domain API over the Camunda Engine API for process creation, configuration, launch, CRUD and administrative operations.
- Used Liquibase, JUnit, Testcontainers, Docker Compose and Jenkins; introduced Checkstyle and PMD rules and supported QA and code reviews.

Tungsten Network — Electronic Invoice Processing | 2019–2021

- Maintained Apache NiFi input-processing flows for receiving, parsing, validating and routing invoice files from SFTP/FTP channels.
- Implemented Scala logic through ExecuteScript and RouteOnAttribute, including retry, error-folder and dead-letter processing.
- Developed a Spring Boot administration service from scratch for operational dashboards, configuration, reporting and Kafka-based reprocessing.
- Worked with Spring Integration, PostgreSQL, MyBatis, Docker, Gradle and Jenkins in an AWS/Kubernetes project environment managed by DevOps.

EARLIER EXPERIENCE

LavkaBabuin — Java Developer / Delivery Manager 2018–2019

Worked on development and modernisation of an e-commerce platform, combining Java development with delivery and product coordination.

JavaRush — Product & Engineering / Java Developer 2013–2018

Developed product features for an online Java learning platform with thousands of users, including payment integrations, ratings and statistics, administration tools, programming exercises and gamification. Participated in product planning, hiring, operations and community development.

Luxoft — Java Developer 2010–2013

Implemented and customised full-text search for existing Java enterprise platforms, including an electronic library and a public procurement portal, using Sphinx/Lucene-based solutions.

Aricent — Software Developer 2008–2010

Worked across telecom and enterprise client projects for customers including Comverse, O2 and Vodafone Ireland, developing Java modules for reporting, data loading, document handling and internal applications.

Earlier Java Projects — CCG, UENS 2007–2008

Developed backend modules and reporting for debt-collection and electricity-billing systems using Java, Spring/Hibernate, EJB, JasperReports and SQL.

SELECTED ENGINEERING STRENGTHS

- Data processing: Spring Batch pipelines, large Excel imports, validation gates, analytical models and dashboard-oriented data marts.
- Workflow and integration: Camunda BPMN, NiFi routing, Kafka-based asynchronous operations and WebSocket multiplayer state.
- Quality and operability: integration testing with real PostgreSQL via Testcontainers, metrics/log investigation and containerised environments.

CERTIFICATION

DeepLearning.AI Data Engineering Professional Certificate 2026

Instructor: Joe Reis • Coursera

Data engineering lifecycle, data architecture, ingestion, transformation, orchestration, modelling and AWS-based data pipelines.
